## When It Comes To Basement Finishing, It's Safety First!

Creating living spaces in basements is a trend that will continue to grow for good reason. In recent years building codes have required that "egress windows" (windows large enough to climb out of in the event of an emergency) be installed. This means a large window well with a step in it must be used outside the egress window.

A commonly used well has been a plastic design of flat parts that snap together to form the walls and steps. A problem that comes up is durability in holding back the heavy earth and water.

Rockwell window wells are a one-piece rigid composite construction that will not collapse from backfill or allow water to leak through the well walls. They are UV stable, rust and rot proof, and stand up to extreme temperatures.

### True Texture™

**Looks and Feels Like Real Stone.** Rockwell has duplicated the look of real stone so you don't have to look out of your new basement windows at a plastic looking well. An integral step allows easy exit if ever needed.

### Well Covers

A Polycarbonate Cover keeps leaves and debris out while allowing natural sunlight to enter your basement. While they are not intended for continual foot traffic, the 10mm fluted polycarbonate cover will hold up to 500 lbs. of weight and prevent family members from accidentally falling into the window well.

#### Premier Series Sizes

Item #	Width	Projection	Height	Weight
08732	66	39	48	69
08733	66	39	60	80
08734	66	44	72	102

#### Well Cover

Item #	Width	Projection	Height	Weight
08730	66	39	N/A	21
08731	66	44	N/A	33
