

*Drains water from doorways,
stairways and the surface.*

TrenchDrain

Surface Drainage System

Prevent basement water damage from water seeping through doorways, garage doors and down stairs with TrenchDrain! In many instances, water is able to enter your house and damage the basement by flowing through the space under a doorway or running down the stairs. Our unique design directs the water into a channel, where it can be managed and pumped out of your home automatically - without causing any damage!

*TrenchDrain shown in front of garage door.
(However, when installed inside the door, the
TrenchDrain will not clog with debris or ice).*

***The TrenchDrain design prevents
water from entering your house
through doorways and stairways.***

The design of the TrenchDrain allows for water to drain into the grate, flow into the patented WaterGuard sub-floor drainage system, and be pumped out of the home. TrenchDrain comes in several different styles: A large size used for traffic bearing and high flow conditions, and a smaller size

**TrenchDrain easily connects to
WaterGuard[®], the unique
sub-floor drainage system.**

used for interior foot traffic applications. Both TrenchDrain systems will prevent water damage to your basement environment, and keep your home safe and dry for the life of the structure.
